

VAYARIN[®]

Medical food for the dietary management of ADHD in children

A DIETARY APPROACH TO MANAGING ADHD

Vayarin[®] is not a drug or a supplement. It is a medical food designed to provide important nutrients to the brain to manage certain lipid deficiencies associated with ADHD.

CLINICALLY SUPPORTED

In clinical trials, Vayarin[®] was shown to effectively reduce hyperactivity and restlessness, especially in children with more pronounced emotional dysregulation.

PROVEN SAFE IN CHILDREN

Vayarin's unique composition was inspired by breast milk and is a key building block of the brain. It's also been proven safe in children, with virtually no side effects.

CLINICAL DATA

Vayarin® was clinically shown to reduce ADHD behaviors, especially in children with more pronounced emotional dysregulation

Results with the subgroup: Children were included in this subgroup if they had an abnormal baseline score (<62) in at least two out of the following CRS T subscales: Oppositional, Hyperactivity, ADHD-index, or Global: Emotionally lability. #p ≤ 0.15 *p < 0.05 Based on analysis of covariance controlled for gender and age. Manor, I., et al., Eur Psychiatry. 2012; 27(5): p. 335-42.

Vayarin® was clinically shown to improve quality of life

Based on Student's t-test. Similar results were observed within a subset of hyperactive-impulsive children for ages 5-16. Manor, I., et al., Eur. Psychiatry. 2012. 27(5): p. 335-42.

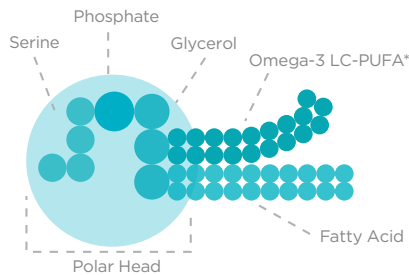

VAYARIN® WORKS

The Vayarin® difference

Vayarin® is a specially designed lipid composition that targets the brain.

Its structure combines Phosphatidylserine (PS) and Omega-3, creating PS-Omega-3, a composition that is designed to travel efficiently to the brain and provide vital nutrients needed to manage certain lipid deficiencies associated with ADHD. This unique structure is what differentiates Vayarin® from other lipid based products.

Vayarin® Composition Phosphatidylserine-Omega-3

Fish Oil Triglyceride

*Long-chain polyunsaturated fatty acids

Why it works

- Vayarin® is formulated to get lipid nutrients to the brain
- Vayarin's unique composition is specially designed to increase the bioavailability of lipid nutrients across the blood-brain barrier (BBB)
- Vayarin's special formulation addresses lipid imbalances that cannot be addressed by modification of the diet alone
